SKILLS

Data Analysis & Wrangling

Python, SQL, Exploratory Data Analysis, Pipeline Automation

Visualization & Reporting

Tableau, PowerBI, Interactive Dashboards

Programming & Architecture

C# (.NET Core), Git, RESTful APIs, Parquet, Hive

Quantitative Finance

CFA Level I curriculum, Time-Series Analysis, Tick Data Management

Education

Chartered Financial Analyst (CFA) Program | Level 1 Candidate

Master of Data Science | Monash University, 2024

Bachelor of Computer Science | Manipal University Jaipur, 2019

PROFESSIONAL SUMMARY

Data Analyst and Software Engineer architecting data-intensive backend systems and automated integration pipelines. Proficient in Python and C# (.NET) for deploying applications, executing complex data wrangling, and structuring high-frequency market datasets. Applies quantitative financial training to perform exploratory data analysis, maintain strict data hygiene, and develop interactive data visualizations for operational reporting. Holds an active visa for working in Australia.

EXPERIENCE

ALH Group & RSL | Gaming Supervisor

Melbourne, AU | Sep 2023 – Feb 2026

- Wrangled and analyzed high-volume daily transactional datasets to perform variance analysis, detecting anomalies in electronic cash flows to resolve ledger discrepancies.
- Evaluated time-series machine telemetry and operational logs to monitor the fault tolerance of electronic gaming systems and identify recurring hardware failure patterns.
- Cleaned and validated raw transactional data against physical inventory records, maintaining strict data hygiene for risk management and regulatory compliance audits.

Master of Data Science

Melbourne, AU | Feb 2022 – Feb 2024

- Instructed 60+ postgraduate students in data analysis, data wrangling methodologies, SQL querying, and Python transformation pipelines during one semester.
- Built Python data extraction pipelines to parse raw email payloads and extract text features for malicious email detection, for research in collaboration with CSIRO.
- Evaluated classification model performance against public LLM baselines, analyzing detection metrics (precision, recall, F1-scores) and error distributions.
- Documented experimental methodologies, benchmark results, and performance trade-offs in research reports and presentation decks for project leads.

NIIT Technologies Pvt Ltd | Software Engineer

Delhi NCR, India | Aug 2019 – Jul 2020

- Decomposed monolithic API services into modular microservices, enhancing system maintainability and fault isolation.
- Developed single-page web application features using Angular, TypeScript, and jQuery, incorporating client-side caching to improve load times.
